

Community Resilience Workforce Development

Building a Stronger Community

ABOUT THE PROGRAM

The community resilience & elevation skills training program is a comprehensive 6-week intensive training curriculum that prepares workers for specialized careers in building elevation, foundation repair, and structural modification projects. Students receive wraparound services including career coaching, employment preparation, and ongoing support throughout the program. Graduates of this program are equipped with industry-recognized training and hands-on experience, making them immediately valuable additions to your workforce.

What CREST Graduates Bring to Your Job Site

Specialized Technical Skills

- Building elevation techniques and lifting processes
- Unified hydraulic jack operation and maintenance
- Steel beam handling and rigging
- Cribbing techniques and applications
- Heavy equipment operation
- Job site safety protocols

Professional Skills

- Time management and leadership
- Conflict resolution

Upon successful completion, students will have:

General Construction/Safety Skills

- National Center for Construction Education and Research
- (NCCER) Core
- OSHA 30-Hour
- Basic Life Support (American Heart Association)

WHY CREST GRADUATES ARE DIFFERENT:

- ✓ **Reduce Training Time:** Workers arrive with foundational safety training and construction knowledge
- ✓ **Fill Critical Skill Gaps**
Specialized training in building elevation and foundation work addresses growing industry demand and gives your team a competitive advantage
- ✓ **Job-Site Ready**
Hands-on training and practical assessments prepare graduates for real job-site work.
- ✓ **Professional Work Ethic**
Workplace communication and conflict resolution training prepares graduates to work well on a team
- ✓ **Long-Term Career Investment**
Leadership training builds workers who can grow into lead roles on your team.
